EDUCATION

Indian Institute of Technology, Kharagpur

B.Tech. in Electronics & Electrical Communication Engineering

2020 - 2024

7.97/10

TECHNICAL SKILLS

Language	Java, C++, C
Frameworks & Libraries	Spring Boot, .NET, Postman, Swagger, Git, Docker
Developer Tools & Platforms	Git, Docker, Postman, Swagger, Linux/Bash
Architecture & Concepts	REST APIs, gRPC, Microservices, System Design, OOP, LLD
CS Fundamentals	Data Structures & Algorithms, Operating Systems

EXPERIENCE

Samsung R&D Institute

Software Engineer

Jul'24 - Present

Noida, India

Cloud based anonymous inferencing (Java — Spring Boot — AWS)

- Engineered a scalable microservice platform on AWS using Spring Boot, achieving 40% higher scalability
- Led the implementation of enterprise security frameworks (encryption, token validation), boosting system security by 60%
- Developed a Java fraud detection system on AWS, boosting accuracy 45% and cutting false positives 30%
- Established a zero-trust architecture using AWS KMS and JWTs, slashing security incidents by 60%

Jio Platforms Limited

Software Development Intern

May'23 - Jul'23

Bangalore, India

E-commerce backend optimization (Java — Spring Boot)

- Streamlined order return tracking by developing Java & Spring Boot APIs, cutting processing time by 20%.
- Refactored service logic, improving efficiency by implementing clean architecture and decreasing response times by 15%.

PROJECTS

Social media platform (ReactJS — NodeJS — AWS)

- Built RESTful APIs using Node.js & MongoDB to manage user profiles, posts, and a dynamic social feed.
- Implemented real-time chat & notifications using WebSockets, cutting server polling by 90% and boosting user interaction.
- Utilized AWS S3 for scalable user media storage, ensuring high availability and fast content delivery.

E-Commerce Microservice Backend (Java — Spring Boot — Kafka)

- Engineered backend REST APIs with Spring Boot for product, cart, and real-time inventory management.
- Utilized Kafka for asynchronous communication between services, ensuring high throughput and fault tolerance.
- Implemented a secure, JWT-based authentication & authorization system to protect user profiles and order data.

ML recommendation engine (Python — Pandas)

- Developed a collaborative filtering engine in Python using Pandas & Scikit-learn to predict user ratings from past data.
- Built a Flask REST API to serve model predictions with a p95 response time under 200ms.
- Designed a data pipeline for periodic model retraining & containerized the prediction service with Docker.

AWARDS AND ACHEIVEMENTS

- Secured a Top 1% rank (211 out of 31k+) in LeetCode contest 161, achieving a peak rating of 1755. profile
- Awarded the company's 'Spot Award' for exceptional performance and cross-functional collaboration.
- Secured a bronze medal with a team of 14+ in Inter-hall Open Software competition, honing skills in open-source.
